FSDL
ASSIGNMENT-05

AIM:-
Design and develop an interactive user interface using React.

OBJECTIVES:-
1. Articulate what React is and its usefulness.
2. Explore the basic architecture of React applications.
3. Use React components to build interactive interfaces.

THEORY:-
Q) What is React? Steps to run React app using create-react-app.
→ React is a javascript library used for building interactive and dynamic user interfaces, especially for single-page applications.
1) Install Node.js → npm install
2) Create React App → npx create-react-app my-app
3) Navigate to project folder → cd my-app
4) Start the application → npm start
5) Open in Browser

Q) Passing Data ~~to~~ through props
→ Props (properties) are used to pass data from parent to child components
Eg: A) Parent Component:

```
function App() {
    return <Greeting name="John" />;
}
```

B) Child Component:

```
function Greeting (props) {
    return <h1> Hello, {props.name} !</h1>;
}
```

Output: Hello, John!

FAQs:-

Q) What are React states and hooks?

→ 1) State:

State is a built-in objects used to store data that can change over time. When state changes, the component re-renders automatically.

2) Hooks:

Hooks are functions that let you use state and lifecycle features in functional components.

Common Hooks:

- useState () → Manage state
- useEffect () → Handle side effects (API calls, etc)
- useContext () → Share data locally
