FSD
ASSIGNMENT-06

# AIM:-
Develop full stack web application using MERN stack to perform CRUD operations.

# OBJECTIVES:-
1) To develop full-stack web application web projects using MERN stack.
2) To learn database connectivity using fetch api.
3) To perform insert, delete, update and search database on database.

# THEORY:-
Q) What is MERN stack?
→ MERN is a full stack Javascript technology stack used to build web-based applications. It consists of:
1) MongoDB - NoSQL database
2) Express.js - Backend web framework
3) React - Frontend library
4) Node.js - Runtime environment
It allows users to use ~~both~~ Javascript for both frontend and backend.

Q) Use of fetch API.
→ The fetch API is used to make network request (like GET/POST) from the browser to servers.
- It helps retrieve or send data.

- Returns promises for handling asynchronous operations.
- Commonly used in frontend apps to interact with backend.

Q) What makes MERN stack the fastest growing tech stack?

→ Uses a single language (Javascript) across the entire app
- Large community and ecosystem.
- High performance and scalability
- Open-source and flexible
- Strong support for modern app development.
